

Unrivaled Wireless Solutions That Deliver Greater Agility

Motorola's unparalleled wireless solutions portfolio, supported by powerful network management and security solutions, provides the agility needed to reduce costs and increase productivity today, while preparing you for future growth, whether you are an enterprise, government, service provider, healthcare facility, educational institution or other organization.

The Industry's Trusted Wireless Partner

No one knows wireless like Motorola. A pioneer in wireless communications, Motorola leverages more than 80 years of experience in wireless technology and customer support. As an acknowledged global leader and innovator, Motorola has earned the trust of a wide range of organizations around the globe, with more than 10,000 networks now in operation in more than 120 countries. Our customers include many of the most progressive and successful organizations in the world, including state and federal agencies, shipping companies, service providers, automobile manufacturers, medical organizations, universities and retailers.

The New Wireless World

In the new wireless world, the value of wireless solutions is multiplied when systems work together seamlessly and are trusted to be reliable, available and secure. With this new-world approach to wireless solutions, organizations can move with greater confidence and speed enabled by trusted wireless networking.

Building Agility With Motorola

Mobilizing voice and data onsite. Highly reliable and secure onsite Motorola WLAN access gives workers the freedom to be effective wherever they are, and Motorola's integrated voice solution allows workers carrying Motorola Total Enterprise Access and Mobility (TEAM) VoWLAN smartphones, voice-enabled mobile computing devices and two-way radios all to talk together whenever needed.

Extending to new places. Whether covering new outdoor areas with WiFi access networks or building new broadband connectivity to hard-to-reach facilities, Motorola's industry leading outdoor wireless broadband portfolio can quickly establish secure and reliable network presence.

Capturing and sharing video. Motorola gives customers the flexibility to place cameras anywhere they are needed for security, incident response and collaboration. Video can be captured and then delivered with superior QoS to users with wireless devices on the network.

Backing-up and replacing leased lines. Industry-leading wireless point-to-point wireless Ethernet bridges from Motorola can either ensure business continuity by backing up traditional leased line connectivity, or reduce recurring costs by serving as a T1/E1 replacement.

Managing the network. Motorola network management tools use powerful map-based visualization technology to help maximize uptime through earlier issue identification and faster recovery. Advanced troubleshooting tools also give the level 1 helpdesk staff the ability to resolve issues more quickly.

Securing and defending the network. Motorola's industry-leading wireless intrusion protection software and superior hardware-embedded security features keep the wireless network running smoothly so that the impact to users and operations is minimized.
